ACTION DONE MATRIX

Capstone Project Title: AI-Powered Predictive Analytics for an Academic Early Warning System
Note to the Researchers: Please submit this form with the revised paper that shall be forwarded to the Capstone Committee/Instructor)

Type of Review: (Please tick) ☑ Internal Review ☐ External Review

Name of Panel	Suggestion of the Panel(s)	Action Taken	Page Number /s
Dr. Sales G. Aribe Jr.	It is recommended that the system automatically create sections after the class list is uploaded.	Integrated an automatic section generator into the system, which activates once the class list has been uploaded.	65-67
	The system should use the student number as the primary basis for data identification, not just the student's name	Fixed a backend issue where the system relied primarily on student names for data identification; the system now uses the student ID as the primary identifier, improving data accuracy and consistency.	36-37, 84
	It is suggested that the system be able to produce a consolidated report.	The system now generates consolidated reports	76, 82
	It is recommended that the system include referral prioritization.	Implemented a classification feature that separates and prioritizes referred students from those who have not been referred.	56, 73-74
	Multiple teachers should be allowed to refer a student.	Enabled multiple teachers to refer the same student, allowing for shared monitoring and collaborative input.	-
Klevie Jun R. Caseres	In the Need assessment form will reflect automatically the information based on referral reason.	Implemented the display of referral reasons within the needs assessment form, allowing users to view the basis for a referral directly on the form.	39, 43, 46, 75
	Lock the page while uploading files.	Implemented a page-locking feature during document uploads to prevent users from navigating away or making changes while the upload process is ongoing.	-
	Can you feed the AI the result of the attendance, CS, Lab, and MO so that it will suggest what will be the next step for the AMU.	Enabled the system to fully feed and analyze attendance, class standing, laboratory, and major output data through AI, allowing it to generate suggested next steps for the AMU based on the results.	55-56, 85-89
	Once a student is referred to the AMU, a referral form is automatically sent to the student as well as the account registration and the needs assessment form that they need to accomplish.	Implemented the automatic sending of the needs assessment form, referral notice, and account credentials through email.	46-49

Rov Japheth G. Oracion	Priority is lowest grade	Implemented a classification feature that separates and prioritizes referred students from those who have not been referred.	54-56, 85, 87
	Matching data in uploading documents.	Fixed the document upload matching function; the system now properly detects mismatched data and displays corresponding notices to the user.	45, 55, 84
