ACADEMIC EARLY WARNING SYSTEM

Requirements Review

Card 01 | Draft - for group review

Proposed QA baseline based on the local AEWS source. This is a review document; requirements are not yet approved. Confirm expected behavior against your Capstone specification.

Team name / reviewer / review date

System and users

AEWS supports academic monitoring and early intervention at Bukidnon State University. Users include instructors, AMU staff, administrators and students. The reviewed project contains React, FastAPI, MongoDB and student-risk prediction components.

Requirements and test coverage

ID / feature	Proposed expected behavior and case mapping
R01 / Accounts	Registration, verification and approval follow the approved lifecycle. Cases: TC-01, TC-02, TC-03
R02 / Sessions	Valid users sign in; invalid, expired and signed-out sessions cannot use protected functions. Cases: TC-04, TC-05
R03 / Access control	Roles and record ownership restrict server-side reads and changes, including student records. Cases: TC-06, TC-07, TC-08
R04 / Classes	Create, archive and restore preserve approved class/enrollment relationships. Cases: TC-09, TC-10
R05 / Academic uploads	Supported classlists, gradesheets and attendance files map to correct identities; invalid inputs are handled explicitly. Cases: TC-11, TC-12, TC-13, TC-14, TC-15
R06 / Grades	Whole grades, components and previous-term values remain distinct and match approved formulas. Cases: TC-16, TC-17
R07 / Attendance	Rates reconcile to approved attendance rules; valid zero and missing data are distinct. Cases: TC-18
R08 / Referrals	Approved whole-midterm rule triggers correct, linked referrals without unintended duplicates. Cases: TC-19, TC-20, TC-21
R09 / Needs assessment	Correct student/form linkage; required answers enforced; valid false/no accepted; token policy enforced. Cases: TC-22, TC-23, TC-24
R10 / Prediction	Entry-point prerequisites, model/profile provenance, feature mapping and output scales are verified. Cases: TC-25, TC-26, TC-27, TC-28
R11 / Support routing	Actions and controlled communications target the correct referred student. Cases: TC-29, TC-30

ID / feature	Proposed expected behavior and case mapping
R12 / Student functions	Students view/update their own permitted information under approved identity checks. Cases: TC-31, TC-32
R13 / Administration	Authorized account/form changes persist and intended audit records are generated. Cases: TC-33, TC-34
R14 / Reports	Dashboards, filters and exports reconcile to authorized source records. Cases: TC-35, TC-36
R15 / Usability	Core tasks are understandable, keyboard-reachable and readable at agreed viewport sizes. Cases: TC-37, TC-38
R16 / Performance	Measured response times compared with team-approved targets under a recorded environment. Cases: TC-39
R17 / Integration	Academic upload through intervention/reporting works end to end after changes. Cases: TC-40

Rules requiring explicit review

Reviewed automatic referral code checks whole midterm grade 2.50 through 5.00 inclusive. Component values alone are not this trigger. Automatic referral is different from a trained-model risk prediction.

The AMU prediction route checks for midterm grades, attendance and a completed needs assessment before inference. The shared inference helper has a different sufficiency check. Confirm intended requirements separately for each entry point.

Class-router upload limits in the reviewed source: 10 MiB per file and 50 MiB per upload session. Other endpoints must be verified independently.

Open review questions

Confirm: approved grade/attendance formulas; duplicate upload policy; access matrix for student endpoints; assessment token expiry/reuse and form versioning; authorized AMU routing scope; model evaluation acceptance targets; Capstone and assessment deadlines.

Decisions / requirement changes / exclusions
